

Microsoft's .NET technology is now the most dominant development platform for business applications. We at Internet Information & Technologies (IIT) have established processes for building any type of .NET solutions, from simple business applications to highly complex distributed systems. Our developers will help you to implement your business requirements into a reliable, high-quality solution within your budget and on schedule. Our work has received outstanding reviews from our clients worldwide.

Our .NET potential

At IIT, we have over 20 dedicated developers with advanced programming skills in ASP.NET, C#, C++, JavaScript and AJAX. Their .NET skill sets include an extensive list of products and technologies and has helped us in successful implementation of the following .NET based solutions:

- Knowledge Management Systems
- Help Desk Ticketing Software's
- Customer Care Software
- Service Request Fulfillment Software
- Dynamic Survey Management
- Document Management Systems with Versioning and Approvals
- Custom Human Resource Management like Share Holder Equity Management Systems
- Corporate Intranet Portal

Outsourcing your .NET project to Internet Information & Technologies

By taking advantage of the power of .NET platform, your company will enhance its competitive power by utilizing the integration of information technologies anywhere - from the mobile computing devices to the ERP applications on a server in the back room; thus establishing a strong competitive edge and a flexible foundation for the future.

Internet Information & Technologies, as your partner, will bring its outstanding experience in .NET into the development process, helping you maximize business value and create new opportunities for success. You can be sure that by outsourcing your .NET project to us you will receive in return:

- Profound experience of our eminent managers, architects and developers
- 100% client orientation, because we always prioritize our clients' requests
- Guaranteed quality as your applications will be efficient and well documented, and its quality will carefully monitored
- Full-scale support and technical consultancy

**SAVE TIME - SLASH COSTS
- INCREASE PROFITS
- USE .NET**

SMART Framework

At IIT, we have created a .NET based Framework for accelerated development, that extends Microsoft's Enterprise Libraries to add generic features that most business applications need. In order to reduce your costs and expedite time to market, we can leverage our SMART Framework to provide you with features such as:

- Security Policy driven functionality (UI access controlled by expressions based on Users or Groups)
- Dynamic authoring of workflow to mimic your business processes
- Extensible UI Screens to add new fields at run time to any entity in the system
- Meta data management for all domain data
- Multi-lingual support for English, French, German, Spanish and Arabic
- User personalization
- Full text and advanced search capabilities
- Fully integrated with AJAX to take advantage of the rich client framework

Send us your RFP at info@iitsw.com and our managers will help you to start a successful collaboration to meet any of your software customization & software integration needs.
